

Regarding the discussion paper you sent to our community.

We are a very small community with little or no access to technical support and very little funding for conversion. Multiplexers would most certainly be beyond the capacity of our community, particularly in relation to dust and extreme weather conditions and availability of technical expertise. We have a very small annual budget to run our community (population 160) and would require some financial assistance to convert our site to digital transmission and would welcome any advice about where funding could be sought to bring this about.

At the moment the community is satisfied with the current analogue service that delivers a clear picture from SBS, ABC, Imparja, Southern Cross and ICTV. We hope that conversion to digital maintains or improves our current service.

regards
