Subject: High speed Broadband

Hi

I think all Rims & Pairgain systems should be removed so people who are stuck behind them can also have a choice of Isp for 'fast' broadband.

I am with Internode for Broadband and they along with other Isp's have installed their own DSLAM equipment into my exchange (Smithfield SA), but I am unable to utilize this as I am stuck behind a Rim. Currently the only way to have 'fast' broadband behind a Rim is to sign up to Bigpond which I would never do.

Thank you for reading
Marie
